

TECHNICAL SPECIFICATION

RINGS OF SHIM

RAW MATERIAL

F.I.A.M.E. rings of shim are produced, on our license and with our own equipment , in collaboration with a company specialized in the molding of precision metallic small parts, whose quality management system is UNI EN ISO 9001: 2015 certified.

They are made from FeDC01 + C590 UNI EN 10139 iron strips purchased from qualified suppliers or ISO 9001 certified and are therefore able to equip the material with all the documentation required by this standard (chemical analysis, mechanical characteristics, hardness, etc.).

WORKING SCHEDULE

- Shearing
- Fettling and oiling

QUALITY CONTROL

During the production, the significant parameters of the production process are kept under continuous monitoring, with frequencies indicated by a specific control cycle and formalized on this one in a self-control basis.

The produced pieces, once they reach the end of the production cycle, before being packaged, undergo a further final inspection by the Quality Control staff, who for each production lot releases a special document, the Quality and Conformity Certificate, of which it is possible to send a photocopy to the customer who requests it.
